

Fishing

in Harmony with Nature

Steelpear

The Steelpear is a fishing weight for bottom fishing. The pear shape ensures aerodynamic casting and good adhesion to the bottom of the water. The ring is used to attach the fishing line. It is worked directly into the body of the Steelpear and is very stable.

Why Steelshark?

Fishing weights made of stainless steel are harmless to health and environmentally friendly.

STAINLESS STEEL

Due to the high density of stainless steel, the fishing weights can be made handy. The stainless steel used is corrosion-resistant to fresh and salt water.

HIGH QUALITY

Steelshark fishing weights are processed to a high standard. All edges are ground down so that there is no wear and tear on the fishing line. Steelpear and Steelolive are each available in 5g, 10g and 20g versions.

Steelolive

The Steelolive has the shape of an olive and is intended for float fishing. The fishing weight has a continuous bore and a threading trough on both sides. That makes it easier for the angler to thread the fishing line.
